Define Problem Statements

Project: Script-Controlled ACL Restrict Record Access Based on Field Value

Date:	30-09-2026	**Team ID:**	SWTID-2026-8933
Project Name:	Script-Controlled ACL Restrict Record Access Based on Field Value	**Maximum Marks:**	2 Marks

Define Problem Statements (Customer Problem Statement Template):

Create a problem statement to understand your customer's point of view. The Customer Problem Statement template helps you focus on what matters to create experiences people will love. A well-articulated customer problem statement allows you and your team to find the ideal solution for your customers' challenges. Throughout the process, you'll also be able to empathize with your customers, which helps you better understand how they perceive your product or service.

Problem Statement (PS)	I am (Customer)	I'm trying to	But	Because	Which makes me feel
PS-1	A ServiceNow System Administrator / Security Lead	Implement a script-controlled READ Access Control List (ACL) to restrict record access dynamically.	Static role-based security allows all users with a general role to view confidential records regardless of specific field values.	Standard ACL configuration lacks dynamic evaluation of record attributes such as assigned user or record state.	Concerned about unauthorized data exposure, compliance risks, and privacy violations.
PS-2	An Assigned Fulfiller / Support Analyst	Access and view sensitive ticket records assigned strictly to me or my immediate group.	Unassigned team members and unauthorized users can view my assigned confidential records across forms and lists.	READ ACLs are currently evaluated based only on generic roles rather than matching user ID with the assigned_to field value.	Anxious about internal data leakage, unauthorized monitoring, and loss of record privacy.
