Brainstorming & Idea Prioritization Template

Date	30 September 2026
Team ID	SWTID-2026-8933
Project Name	Script-Controlled ACL Restrict Record Access Based on Field Value
Maximum Marks	4 Marks

Step 1: Brainstorm and Idea Listing

Ideas are focused on enforcing record-level security through script-controlled READ, WRITE, CREATE, and DELETE ACLs, using user roles and record field values.

S.No	*Team Member*	Idea / Suggestion	Category
1	*Rohan Rishikesh B*	Use a script-controlled READ ACL to allow users to view records only when their role and required field values match.	Record-Level Access Control
2	*Suraj Narayan D*	Use a WRITE ACL script to prevent unauthorized users from modifying protected records.	Data Modification Security
3	*Ralph A*	Use a CREATE ACL script to control who can create new records based on user roles and record conditions.	Record Creation Security
4	*Surya M K*	Use a DELETE ACL script to restrict deletion of sensitive records to authorized users.	Data Protection
5	*Sundhareshan V*	Combine user roles with record field values in ACL scripts so access is granted only when all required conditions are true.	Conditional Security

Step 2: Idea Prioritization

Rate each grouped idea on feasibility and importance, then select the final idea(s) to move forward with.

Suggested final idea: A Script-Controlled ACL that restricts record access by evaluating specific field values and user conditions.

Group No.	Final Idea	Feasibility (High/Medium/Low)	Importance (High/Medium/Low)	Priority Selected (Yes/No)
1	Script-controlled READ/WRITE/CREATE/DELETE ACLs for record-level security	High	High	Yes
2	Role and field-value based conditional access using ACL scripts	High	High	Yes
3	Consistent ACL enforcement across forms, lists, and Service Portal	Medium	High	Yes
